Project Assignment

Task:

- Compute the 95% CVaR across a 3-year horizon for a multi-asset portfolio
- Decompose the CVaR and explain the major drivers

Portfolio Assets:

US Equities (SPY)	40% weight, 6.0% expected return
US Bonds (AGG)	20% weight, 4.5% expected return
US Private Equities (Cambridge Associates Index)	25% weight, 9.5% expected return
US Real Estate (NCREIF Property Index)	15% weight, 7.0% expected return

- Assume portfolio rebalancing every quarter

Deliverables (by 1st May 2026):

- 20-min presentation in recorded video format (where all group members' faces are visible)
- Fully reproducible code repository

Assessment:

- Technical soundness, empirical rigor, clarity, reproducibility, qualitative reasoning
